Flame control: Stable gas control for constant flames

The most important precondition of constant quality in flame control is that the gas mixture or proportioning is stable. The fast regulation and high precision of Vögtlin’s thermal mass flow controllers – controlled and monitored through a PC or PLC – is highly impressive. The reproducibility of production processes soon pays off.

Key Features
- Fast regulation
- Very short reaction times
- High precision
- Flexible mixtures
- Easy operation through PC or PLC
- High reproducibility

Interfaces
- Analog
- Modbus RTU
- Profinet / EtherCAT

Typical applications
- Welding
- Cutting
- Burners
- Furnace building
